

COMPANY PRESENTATION

ABOUT US

3R Energy srl is a company that operates mainly in the renewable energy sector, was founded in 2005 as a family holding company in order to better manage various personal holdings of Mr. Riccardo Ducoli, 3R Energy participates in various companies: wind, solar, biomass, hydropower, engineering, management, optimization and energy savings. The group's assets are mainly concentrated in Italy, Brazil, Romania and Belarus. The group is coordinated by highly professional team with considerable experience in engineering, construction, management systems and in legal and financial sector.

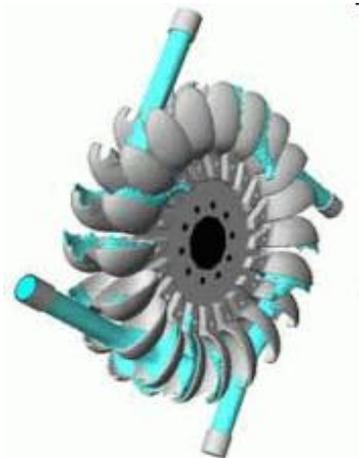

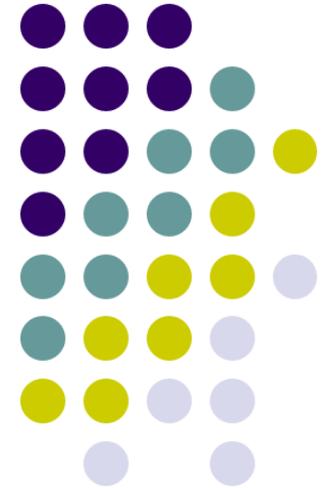

HYDROELECTRIC

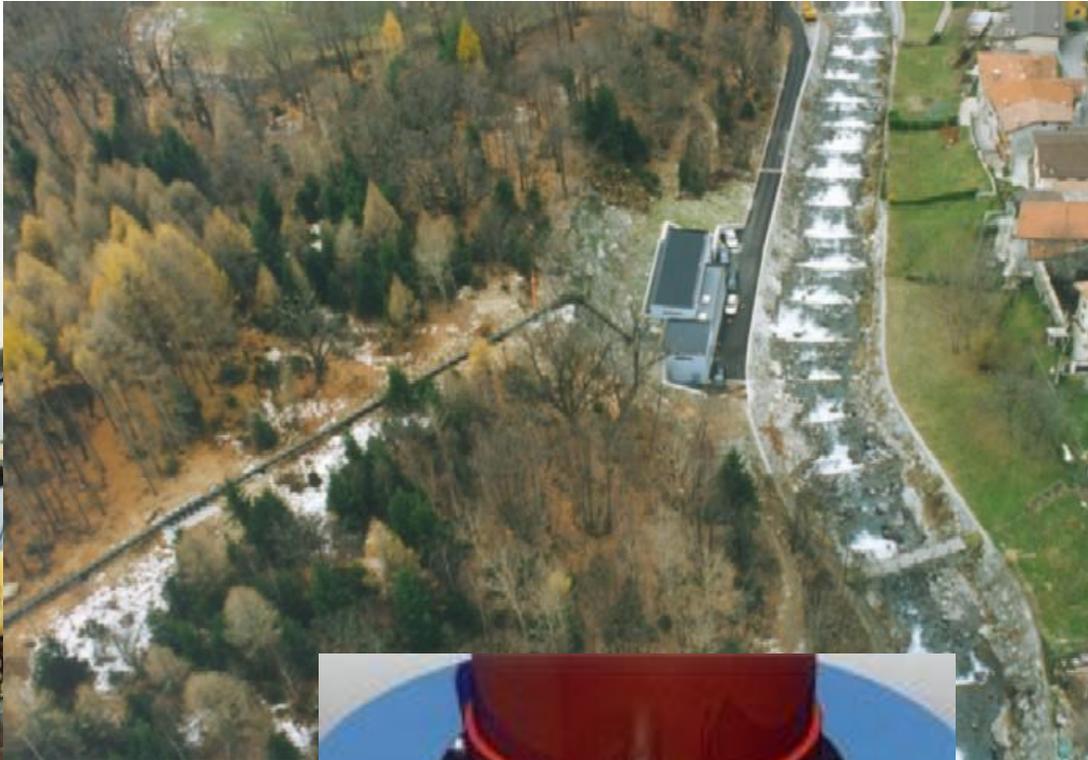

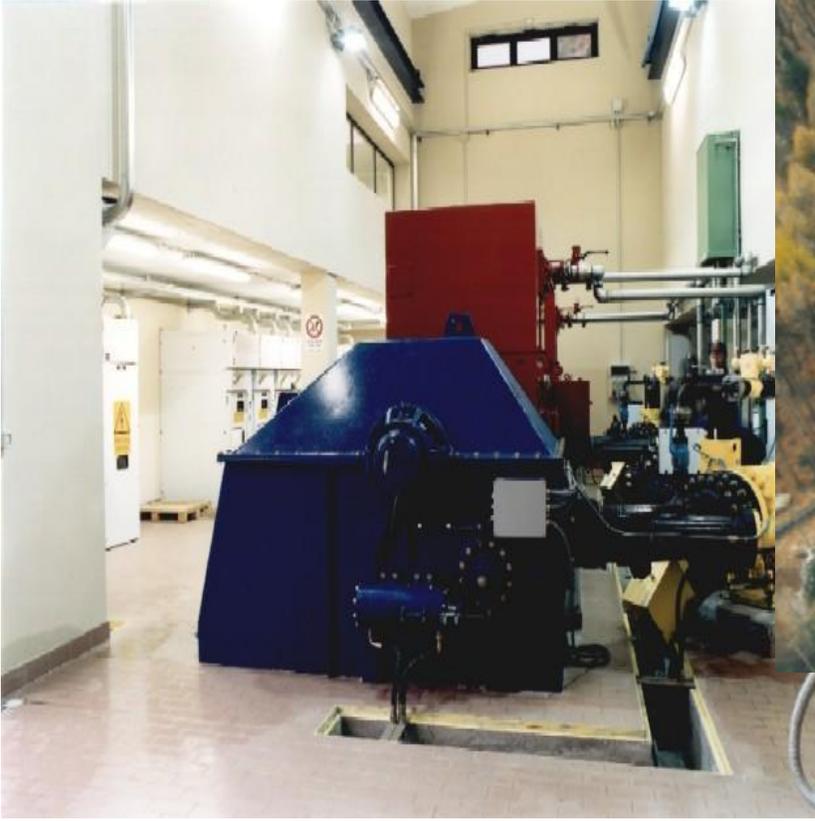

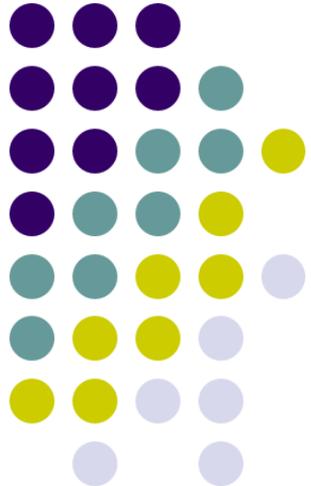

The Company has developed and is planning several projects for the construction of hydroelectric plants in Italy and abroad; The Company missions are design, construction and operation of hydroelectric power plants of small and medium size and hydraulic engineering works both in Italy and in foreign countries.

The Company is currently developing projects in Romania, Poland and Lombardy (administrative region of Italy,) and aims to complete a number of investments to add to own portfolio of initiatives.

HYDROELECTRIC PLANT WORK IN PROGRESS

WIND POWER

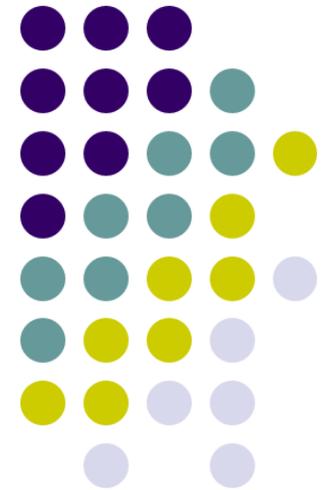

3Renergia invests substantial resources to develop its business in the wind power sector. The 3R group participates in different wind farms already built and workable and in a series of projects that involve investments in Italy and abroad. Through the participations in Fortore Energy SpA, Futura SpA, the Company has participated in the construction and the management of wind farms – for over 400 MW, and projects that will ensure development resources in the coming years.

The Group now has operating units in Puglia, Campania, (administrative regions of Italy) Armenia and Romania

The company is working to the project of 200MW “Off Shore” in Rimini (Italy)

WIND FARMS

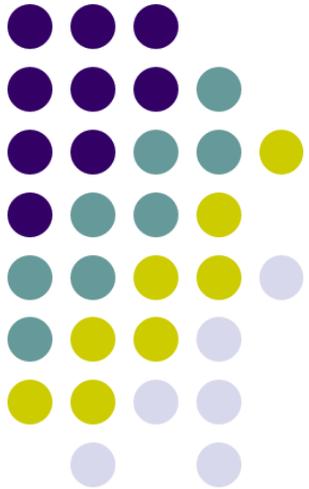

PHOTOVOLTAIC

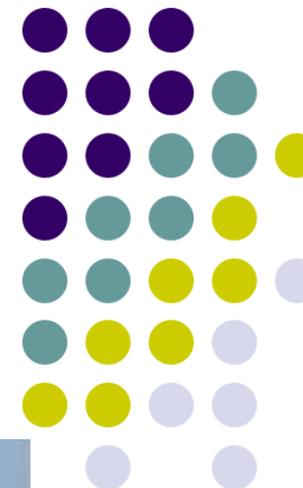

The company has developed and has plans to develop projects for the construction of photovoltaic plants in Italy and abroad.

In co-operation with IngBrazil srl it has developed the project of around 150 MW

PHOTOVOLTAIC PLANT

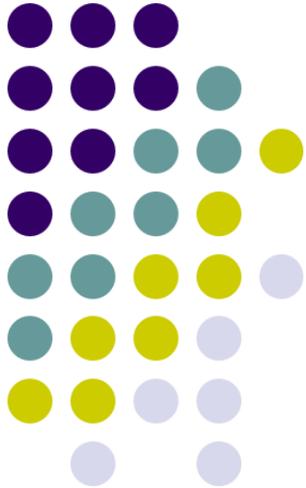

BIOMASS

The combustion of biomass, from the point of view of history, is the oldest form of energy used by man, the burning of wood or other organic materials is a way to produce heat and, therefore, energy. 3Renergia srl has all necessary experience and skills to design, construct and manage of biomass plants in residential complex, medical facilities, school buildings and district heating systems.

A lot of attention is today to the “circular economy” in the field bioenergy in particular for composting and biomethane.

A special experience also in the field of cogeneration with vegetable oil with heat recovery for district heating network.

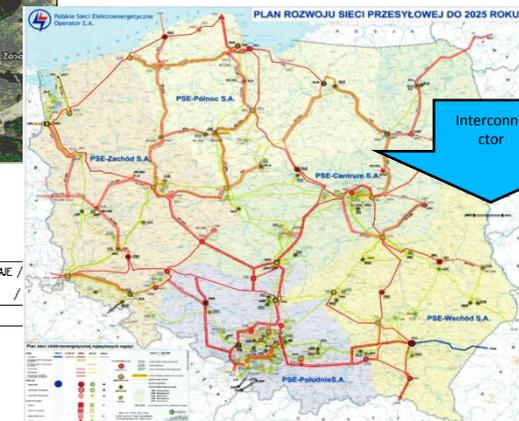

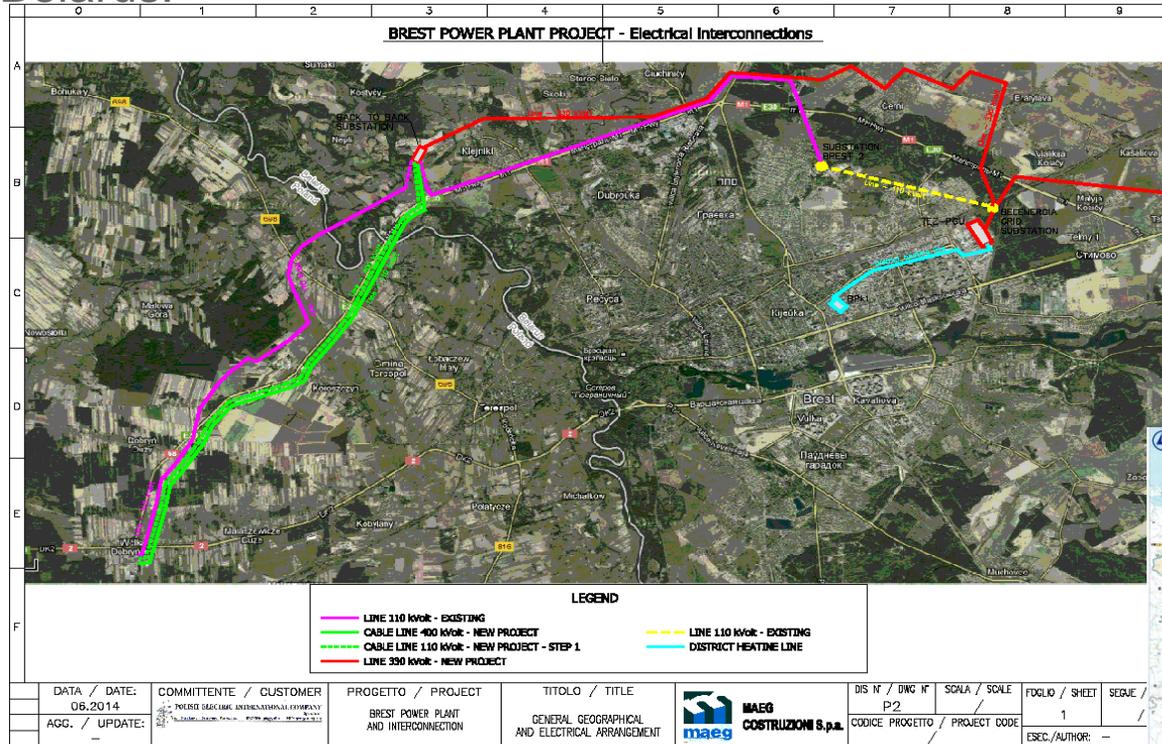

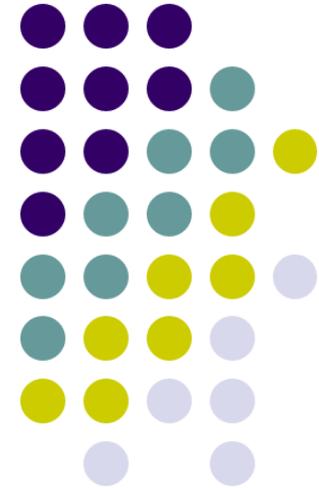

ELECTRICITY GRIDS AND INTERCONNECTION LINES

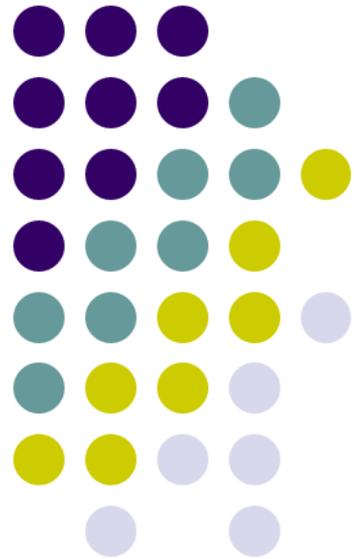

Through participation in IOOO BelEnergia the Company is currently developing the project for interconnection line of 110 and 500 MW between Poland and Belarus.

ELECTRIC MOBILITY AND STORAGE, bicycles, electric motor scooter and cars

To respond to the needs of an increasingly attentive consumer, but above all to protect the environment, the 3Renergia company offers the possibility to buy pedal assisted bicycles, electric scooters and cars.

ENERGY EFFICIENCY SERVICES

3R Energy srl operates as "Energy Service Company" (ESCO), is performing toward third parties (private or public) technical advice, administrative, planning, optimization of energy management services and overall consumption of energy.

The company, directly and / or through its participation, carries out the following activities:

- design, construction, maintenance, management and restructuring of installations for production of electrical energy derived from any source;
- production and trading of electricity mainly from renewable sources;
- design, implementation and management of "energy services" and "global service" for public , private and industrial entities;
- design, construction, management and maintenance of district heating plants;
- design, construction, management, marketing of machinery for exploitation of renewable energy sources (wind turbines, hydraulic turbines, cogenerators etc.) and instrumental means (anemometers, software, etc.)
